

# **The Science of Turntablism**

**Presented by  
Jamie Simmonds, Steve Macatee & Steve Turnidge  
and  
The Pacific Northwest Section of the AES**

**Wednesday, February 8, 2017**

# Outline

- **Steve Turnidge - Introduction**
- **Jamie demos Turntablism**
- **Turntablism History**
- **DJing Evolution: Crates, Content...**
- **Gear Evolution: Turntables, cartridges, mixers, files, computers, OSes, USB Drivers**

# Terms

# Terms

- ***Turntablism*** - manipulation of music using turntable(s) and a mixer as an instrument.

# Terms

- ***Turntablism*** - manipulation of music using turntable(s) and a mixer as an instrument.
- ***DVS*** - Digital Vinyl System (a.k.a. “vinyl emulation”)

# Terms

- ***Turntablism*** - manipulation of music using turntable(s) and a mixer as an instrument.
- ***DVS*** - Digital Vinyl System (a.k.a. “vinyl emulation”)
- ***Control Vinyl*** - The special vinyl record in DVS Systems used to determine position, direction, speed... of the stylus

# Terms

- ***Turntablism*** - manipulation of music using turntable(s) and a mixer as an instrument.
- ***DVS*** - Digital Vinyl System (a.k.a. “vinyl emulation”)
- ***Control Vinyl*** - The special vinyl record in DVS Systems used to determine position, direction, speed... of the stylus
- ***Control Signal*** - The audio signal pressed into the vinyl. Hint - it is not the music.

# Old Problems for DJs

# Old Problems for DJs

- **Crates of real music vinyl are:**
  - **Heavy**
  - **Expensive to create ship, replace, duplicate**
  - **DJ's can't fulfill any requested song...**

# **Old Problems for DJs**

- **Crates of real music vinyl are:**
  - **Heavy**
  - **Expensive to create ship, replace, duplicate**
  - **DJ's can't fulfill any requested song...**
- **Can't easily play newly created music, loops, etc...**

# Old Problems for DJs

- **Crates of real music vinyl are:**
  - **Heavy**
  - **Expensive to create ship, replace, duplicate**
  - **DJ's can't fulfill any requested song...**
- **Can't easily play newly created music, loops, etc...**
- **Can't manipulate live audio**

# Basic Setup #1

Round Trip Latency  
from 7 to 10  
milliseconds

The diagram illustrates the connection of a Rane SL4 interface to various audio equipment. At the top, two laptops are shown, each connected to the SL4 via a USB cable. The SL4 is a central black unit with multiple ports. It is connected to a mixer below it. Red lines indicate connections from the SL4 to the mixer's line inputs and record output. At the bottom, four turntables or CD decks are shown, each connected to the SL4 via a cable. The SL4 also has a USB port for a laptop. The mixer is a Rane mixer with various knobs and buttons. The turntables and CD decks are also Rane products, featuring the Scratch Live logo. The diagram is labeled with 'TO MIXER LINE INPUTS' and 'FROM MIXER RECORD OUTPUT' in red text.

# Interesting Issues...

---

# Interesting Issues...

- **How do you make the (MP3...) audio file sound like a piece of vinyl slowing down?**
-

# Interesting Issues...

- **How do you make the (MP3...) audio file sound like a piece of vinyl slowing down?**
  - **Answer: emulate needle response for playback**
-

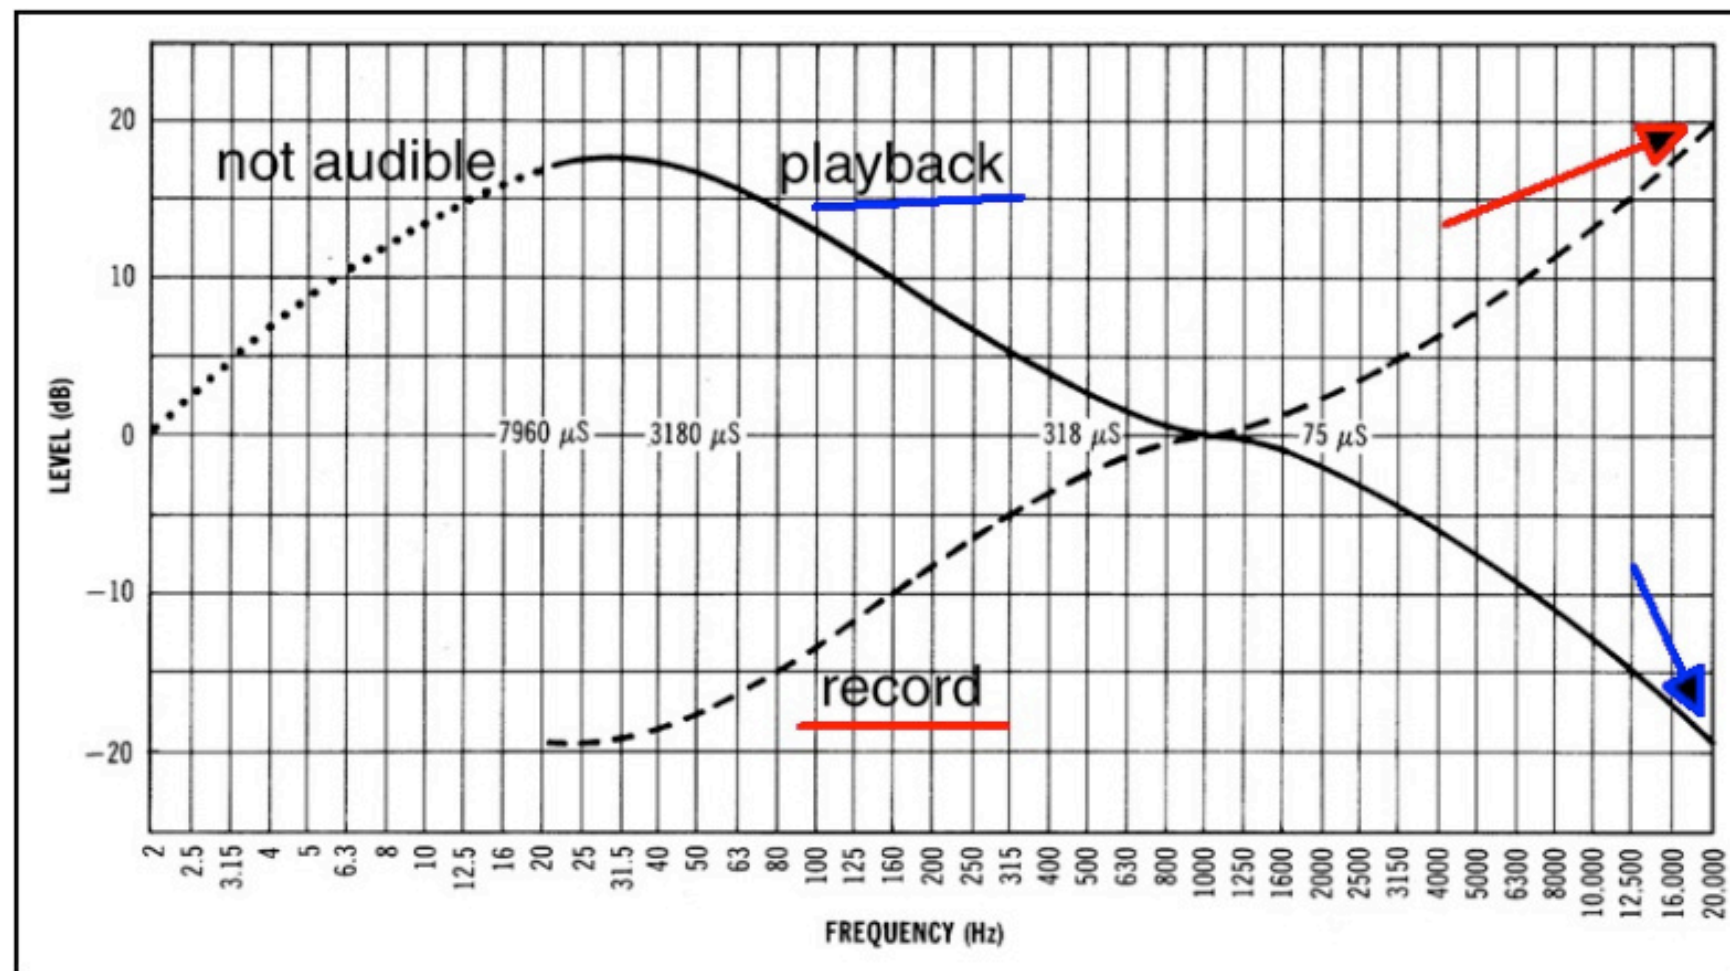

# Interesting Issues...

- How do you make the (MP3...) audio file sound like a piece of vinyl slowing down?
  - Answer: emulate needle response for playback
- 
- RIAA Circuits are only in the control signal path...  
not what is “heard”

  - **Absolute vs Relative Mode**
  - **Scope view finds: Burn/Wear. Dust.**

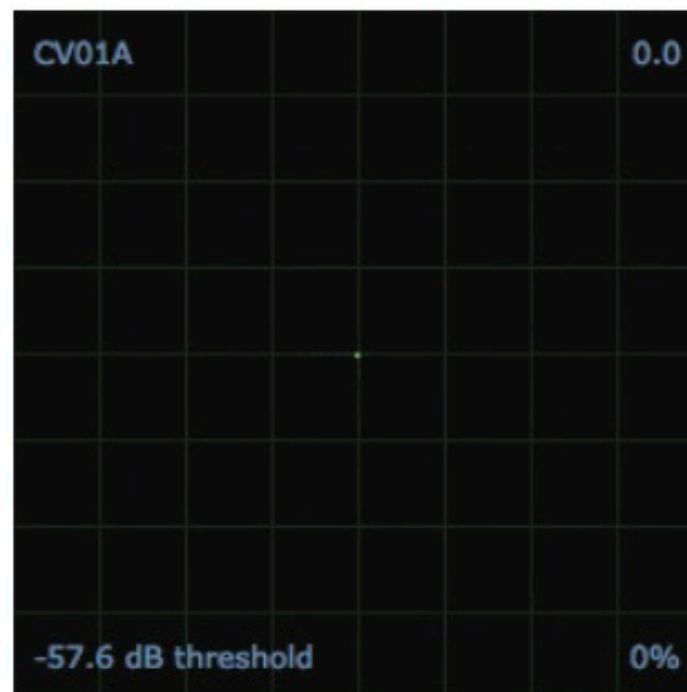

# Scope Reading and Fixes

Most of the problems that occur with Scratch Live can be attributed to it not getting a good reading of the control signal from your records or CDs. These examples show what the scopes on the setup screen can look like to help solve possible problems. Some problems cause similar looking scopes, e.g., if your scopes look like the Dusty Needle one, the cause could be a damaged needle.

**GOOD SIGNAL** - Clean signal with 100% tracking.

**NO SIGNAL** - Scratch Live is not receiving any control signal - check your connections.

**BAD TURNTABLE VIBRATION** - Bass is reaching the stylus. Try to isolate the turntable from the speakers.

**CD PLAYER INTO PHONO INPUT** - The SL3 is set to receive a phono level input. Switch to the correct setting on the SL3.

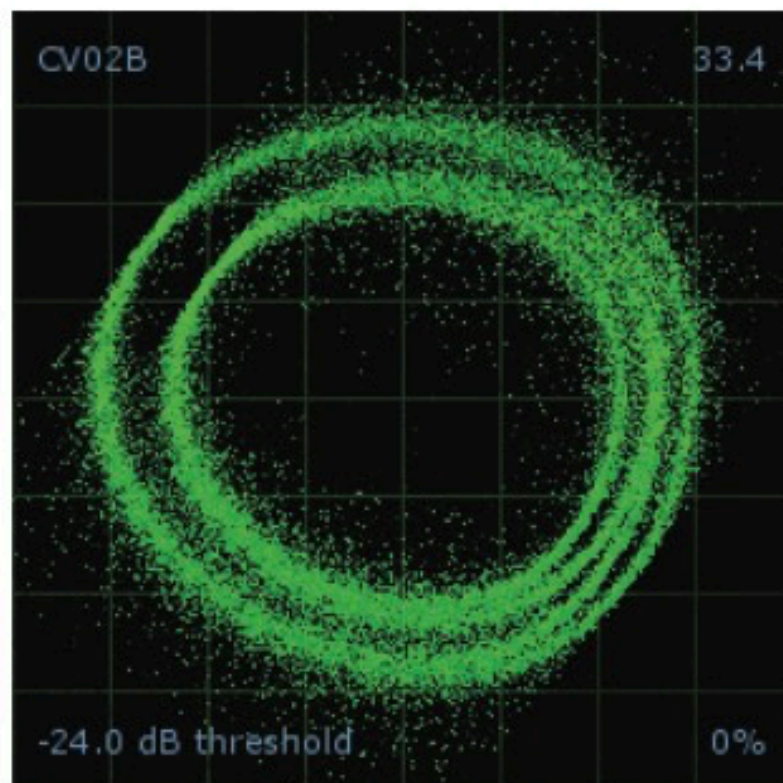

**PHONO INTO LINE INPUT** - The SL3 is set to receive line level input. Switch to the correct setting on the SL3.

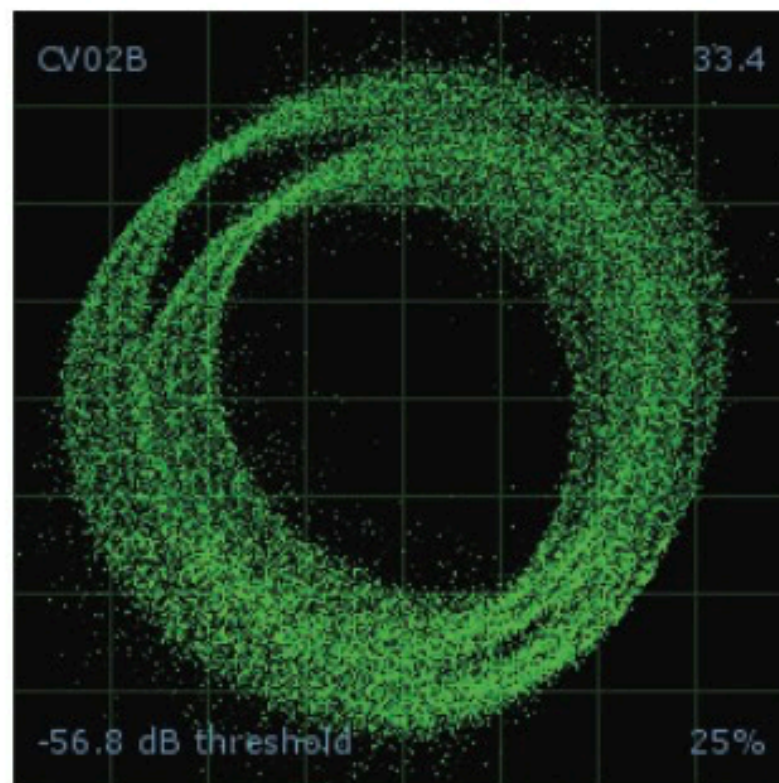

**DUSTY NEEDLE** - Dust is preventing the stylus from tracking the groove correctly. Clean your needle and the control vinyl.

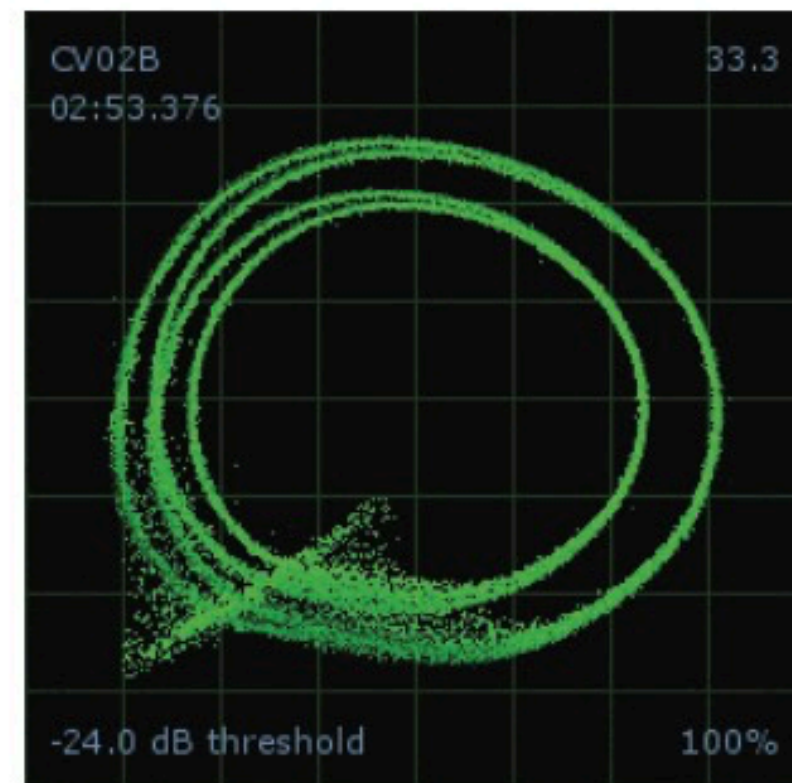

**UNEARTHED** - Very susceptible to interference. Attach the turntable's ground wire to the SL3 or mixer.

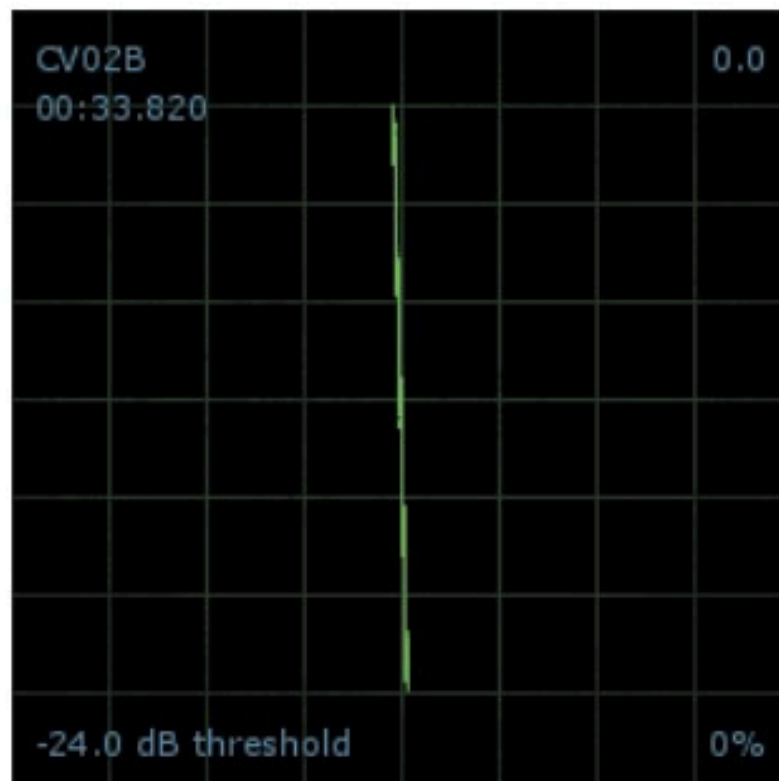

**USING PIGGYBACK CABLES** - Picking up lots of noise, barely tracking. Connect your turntables directly to the SL3.

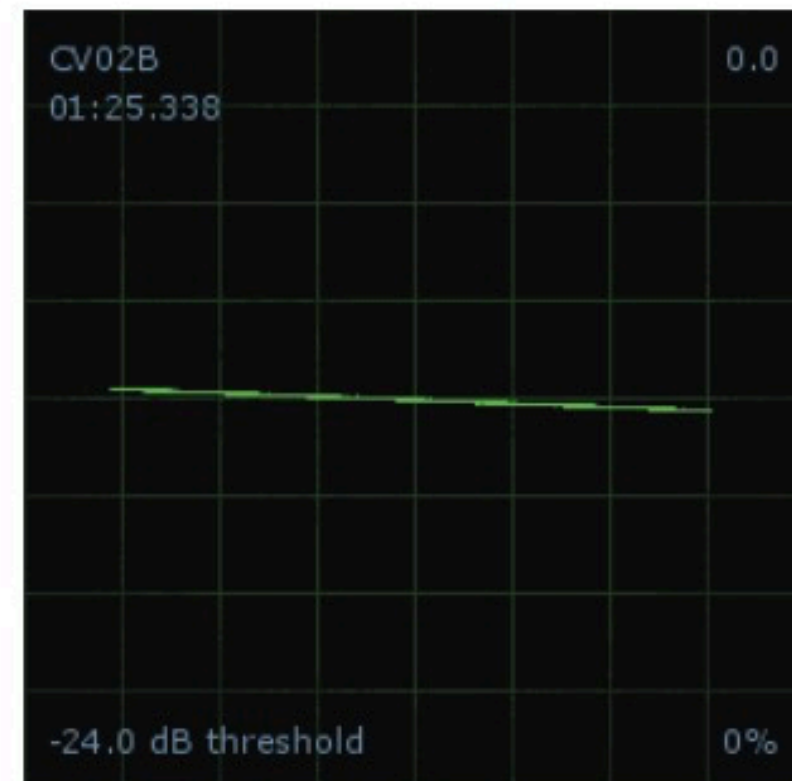

**DAMAGED NEEDLE** - Try re-seating, cleaning or replacing your stylus.

**RECORD BURN** - This section of the control vinyl has been worn. Swap sides or use the track start offset.

**LEFT CHANNEL MISSING** - The signal from the needle is not reaching the SL3. Check the cable and cartridge wiring.

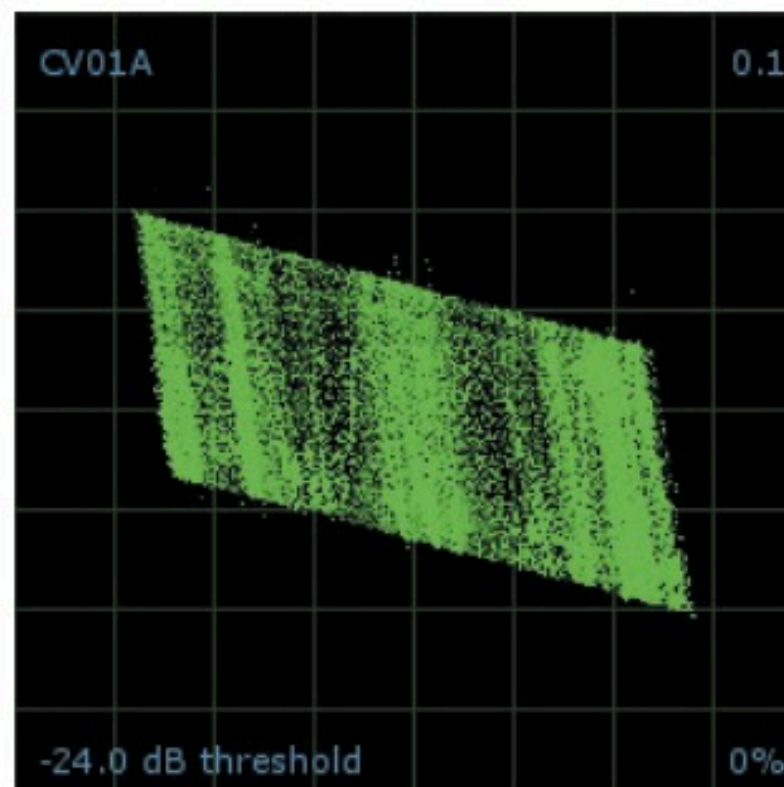

**RIGHT CHANNEL MISSING** - The signal from the needle is not reaching the SL3. Check the cable and cartridge wiring.

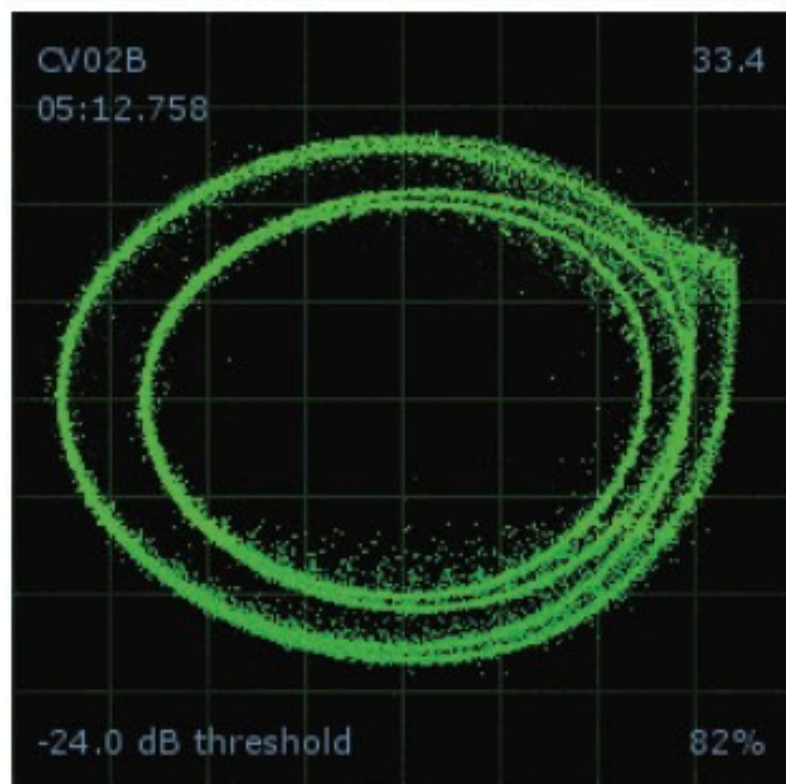

**BAD RECORD BURN** - Your record is badly worn and Scratch Live is unable to track. Swap sides or get new vinyl ASAP.

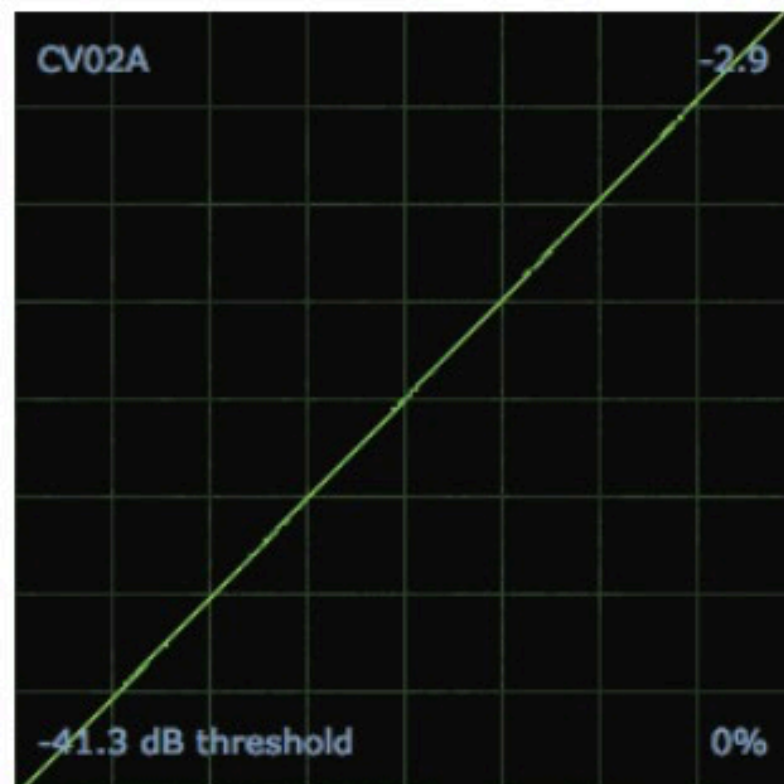

**LEFT CHANNEL IS NOISE** - Left signal has been lost with a noisy loose connection.

**RIGHT CHANNEL IS NOISE** - Right signal has been lost with a noisy loose connection.

**TONEARM IS SLIGHTLY TOO LIGHT** - Susceptible to dust and vibration. Adjust the tonearm.

**SIGNALS ARE SUMMING TO MONO** - Left and right signals have been combined into one somewhere in your signal chain.

**RIGHT CHANNEL IS INTERFERENCE** - Right signal is lost with a noisy loose connection and left channel crosstalk.

**THANK YOU**
